**Subject:** Request to Discharge CAF Water at NBF

Barbara:

Boeing is requesting permission to discharge 18,000 gallons of carbon treated water from the NBF catch basin cleaning project. The water has been processed accordingly to the May 24, 2001 letter from Louis Babich. KCDNR procedure was followed by collecting discrete wastewater samples from the bottom, middle and top of the second baker tank. The bottom layer of the holding tank was agitated prior to collecting the bottom sample.

Baker Tank # SFVD-4121L

Chemical analysis is being faxed to you. PCB levels were found not to be above our detection limit of <.25 ppb.

Please let us know if this miscellaneous discharge is acceptable for disposal to the sewer system. Thanks.

Larry Petersen
